SAFETY INFORMATION

• To avoid unnecessary damage to the balance, please pay attention to the following tips.

• Please do not use this balance in dangerous area.

• Only the trained technicians could operate this balance.

• Please turn off the power of the balance before connect it or disconnect it with other facilities.

• If the environment requires a higher safety standard, please follow the relevant installation instructions.

• Excessive electromagnetic interference will make the displayed value in this balance change. Once the interference is dismissed, the balance could operate in normal way.

• Please avoid any liquid on the surface of the balance. A piece of lightly damp cloth is allowed to wipe the balance.

INSTALLATION

• Please make sure the local voltage is in line with the rated voltage on the name board.

• Please pay special attention when use RS-232 as the pins location might be incompatible with our facilities. Please check the pins locations before the connection and turn off the connection of different configuration.

• If the facility or the power cord has apparent damage, please turn off
the power, put it or them in a safe place and do not use it or them before they are fixed.

- This balance could only be connected to our accessories or optional fittings. We are not responsible for any modification the operator makes to our balance, including using the facilities and cable which are not supplied by us. However, we are always ready to offer the operation norms information.

- Please do not open the balance. If the guarantee label is damaged, our quality guarantee will automatically cease being effective.

- If the balance does not work well, please contact your local distributor or our customer service center.

**PREPARATORY BEFORE USING**

**Storage**

This balance requires an environment which is free from excessive high or low temperature, corrosive, vibration, air current and collision.

**Unfolding the package**

- Unfold the package and check if there is any outer damage of the balance.

- If there is outer damage, please refer to section routine maintenance and troubleshooting.

- Please keep all the package for possible transportation in the future. When pack the balance, please remove all the cables to avoid unnecessary damage.
Packing list

- The balance
- Weighing pan
- Pan support
- Glass windshield
- Density accessories
- Power adapter
- User manual
INSTALLATION OF THE BALANCE

Put it in a proper place, please avoid the following situations:

- Much heat and direct sunlight.
- Air currents and vibrations.
- Excessive moisture.

Usage Conditions

Please do not lay the balance in a quite damp place for a long time. If the balance is transferred from a lower temperature environment to a higher temperature environment, please lay it there with power off for around 2 hours.

Installation sequence

- Assemble the parts in the indicated order.
Install the balance with density measurement device

1. Bracket
2. Beaker holder
3. Beaker
4. Convex holder (concave holder)

1. Put the bracket on the balance and adjust it to the right angle.
2. Put the beaker support and beaker onto the bracket in proper sequence.
3. Fill the beaker 5mm from the rim of it.
4. Test the temperature of liquid with thermometer.
5. Choose the right holder and hang it on the holder.

Connect the Power Adaptor

Only the power adaptor offered by us is allowed.

- Connect the power adaptor to the balance
- Connect the power adaptor to the power socket

Install the External Facilities

Make sure to turn off the balance before connect it or disconnect it with external facilities (such as printer or computer)
Preheat Time

To assure the measure accuracy, the balance must be preheated for 30 minutes before normal operation.

Adjust the Level Gauge

Purpose:

- Adjust the level gauge of the balance, the level gauge needs to be adjusted once its place is changed. The two front bottom bolts are used to adjust the level gauge.

- Spin the two bolts as shown in the figure until the bubble in the level gauge is in the center of the circle.

- Normally, it needs to be adjusted repeatedly.

DISPLAY DESCRIPTION
1. Weighing Units
2. Level Gauge
   Net: Tare Weight / Gross Weight / Net Weight
4. Capacity / Readability
5. OK indicator: stable display

Display Information:

OK - Reading shown is stable.
g - Reading shown is given in grams.
g/cm³ - Reading shown is given in density units.
-------- The balance is developing a stable reading

UNABLE – Error operation.

HHHHH – The weight on the pan exceeds the max. capacity of the balance.

LLLLLLL – The pan is not properly seated or has been removed.

KEYS DESCRIPTION

Menu key
Calibration / Adjustment key
Print / Output key
Function / Confirmation key
CALIBRATION

Procedure

1. Adjust the level gauge and preheat it for 30 minutes.
2. Press \( \text{Tare key} \) key.
3. Press \( \text{CAL key} \), the balance will read its full range (e.g. 200), press \( \text{Tare key} \) repeatedly, it reads the calibration point within the range (e.g. 200, 100, ...).
4. Choose one calibration point and place the right weight on the pan. Press \( \text{Cal key} \), the balance starts calibration, “ACAL” displayed.
5. When the external calibration is 200.000g finished, the balance reads the value of the weight on the pan (e.g. 200).

BASIC WEIGHING (Tare function)

Procedure

1. Press the key \( \text{I/} \), the balance will automatically proceed system initialization and deduct the tare weight.
2. Place the container on the weighing pan.
3. Press the \( \text{Tare key} \).
4. Place the simple object in the container.

5. Print the weight value pressing the key.

SOLID / LIQUID DENSITY MEASUREMENT

Applied formula:
Sample density = Weight in the air / (Weight in the air – Weight in the liquid)
* Liquid density

Test solid material density

Because the buoyancy of the liquid density depends on the temperature, temperature varies 1°C, the density of distilled water will change 0.02%. In order to modify the effect of temperature on density, please set the temperature refer to function setting section:

If necessary for repeating, please start the procedure from step 4.

**USER SETUPS**

The balance could be set up to meet individual requirement.

1. Press the \( M \) key to enter setup program.

2. Press the \( \downarrow \rightarrow \leftarrow \) key to choose the parameter to be set up and then press the \( \uparrow \rightarrow \leftarrow \) key to confirm.

3. Anytime to exit the setup program, press the \( \downarrow \rightarrow \leftarrow \) key, it reads “ESC”, then press the \( \uparrow \rightarrow \leftarrow \) to confirm.

**PRINT SETUP**

There are three types of printing mode for electronic balance:

- **Stable Output** (STABLE): output after reading value is stable.
- **Instant Output** (INSTANT): instant output after press \( \square \) key.
- **Interval Output** (INTERVAL): interval output with preset time.
Users can set up Line Feed for label printing.

※ Printing mode and line feed numbers set apart, after setting up printing mode, line feed numbers can be set.

Please set up printing mode according to below steps:

1. Press the $\text{M}$ key, the display will show “$\text{PrInT}$."
2. Press $\text{M}$ key to enter into menu, “$\text{STAbLE}$” displayed, default is to stabilize the output.
3. Press $\downarrow$ key to choose printing mode you would like, press $\uparrow$ key for confirmation.
4. After enter into menu, press $\downarrow$ key to choose Line Feed “$\text{InTEr}$”, press $\uparrow$ key for confirmation, balance displays “$0 \text{ SEC}$”, press $\downarrow$ key repeatedly to check the preset time interval, then press $\uparrow$ key for confirmation. If to choose “$0 \text{ SEC}$”, it means Continuous Output.
5. Press $\uparrow$ key to back to normal weighing mode.
6. Enter into Print Setup Menu, press $\downarrow$ key repeatedly, choose Line Feed to set up “$\text{LinEFd}$”.
7. Press $\downarrow$ key repeatedly to check the preset line feed numbers (1-18). After choosing proper line feed numbers, press $\uparrow$ key for choice, back to normal weighing mode.

**SET BAUD RATE AND CALIBRATION MODE**

1. Press $\text{M}$ key for entering into Menu Setup Mode.
2. Press $\downarrow$ key repeatedly till “$\text{bAud}$” displayed.
3. Press \( \uparrow \) key to enter into Baud Rate Setup Menu, “300” displayed.

4. Press \( \downarrow \) key repeatedly till the baud rate you want displays, then press \( \uparrow \) key for confirmation, after “PArITY” displays, set up Parity Check.

5. Press \( \uparrow \) key for choosing Parity Check, balance first displays “nOnE” (no check).

6. Press \( \downarrow \) key for checking choice, “Odd” means odd number check, “EvEn” means even number check.

7. Press \( \uparrow \) key for confirming proper checking type, then back to normal weighing mode.

RESTORING FACTORY SETUP

1. Press \( \text{M} \) key for entering into menu of the balance, “PrInt” displays.

2. Press \( \downarrow \) key repeatedly till “InITIA” displays.

3. Press \( \uparrow \) key for confirmation, after the balance displays “BUSY”, back to normal weighing mode, Restoring Factory Setup is over.

BACKLIGHT SETUP

1. Press \( \text{M} \) key for entering into menu of the balance, “PrInt” displays.

2. Press \( \downarrow \) key repeatedly till “bLgHT” displays, press \( \uparrow \) key for confirmation, balance displays “1 nIn”.

3. Press \( \downarrow \) key repeatedly to choose backlight time (1, 2, 3, 5, 10, 15, 30, 60 are options, means backlight turns off time range is 1-60 minutes).
4. Press key for confirmation, balance can be back to normal weighting mode.

TEMPERATURE SETUP

1. Press key, “CEnTlg” displays.

2. Press key, default “20” temperature value displays (or the temperature value set last time displays). If the referential liquid’s measured temperature is lower than the displayed temperature, press key to reduce till the reading is same as the referential liquid’s measured temperature. If the referential liquid’s measured temperature is higher than the displayed temperature, press key to increase till the reading is same as the referential liquid’s measured temperature.

3. After setting up temperature, press key, value flickers, press key for confirmation, Temperature Setup is over.

STATE OF GOAL OBJECT SETUP

Before density measurement, please set up the State of Goal Object, steps are as follows:

1. Press key, “CEnTlg” displays;

2. Press key, “SHAPE” displays;

3. Press key, “SOLID” displays;

Remarks:
If measuring solid’s density, press key for confirmation after step (3), State of Goal Object Setup is over; If measuring liquid’s density,
please continue to step (4).

4. Press \( \downarrow \rightarrow \leftarrow \) key, “LIQUID” displays, then press \( \uparrow \) key for confirmation.

**MEDIA PARAMETERS SETUP**

1. Press \( M \) key, “CEnTlg” displays.

2. Press \( \downarrow \rightarrow \leftarrow \) key repeatedly till “COEFF” displays.

3. Press \( \uparrow \) key, the parameters set last time displays, for example: 1.

4. Press \( \uparrow \rightarrow \leftarrow \) key, “SET dP.” displays, press \( \downarrow \rightarrow \leftarrow \) key to move decimal point, then press \( \uparrow \) key for confirmation. Press \( \downarrow \rightarrow \leftarrow \) key to reduce density value, or press \( \uparrow \rightarrow \leftarrow \) key for increasing.

**Remarks:**

a. Set up liquid media’s parameter as 1 (distilled water) while measuring solid’s density;

b. When measuring liquid’s density, user can choose weight as the measuring solid, measure its density first, then input density value, test the liquid’s density with the solid you chose).

5. After adjusting density value, press \( M \) key, the density value flickers, then press \( \uparrow \rightarrow \leftarrow \) key for confirmation, Media Parameters Setup is over.

**ADDITIONAL FUNCTIONS**

**Bottom hook weighing**

There is a hole at the bottom of the balance for the optional weighing hook (It is not allowed to use the bottom part to balance in Legal Metrology)
1. Open the bottom cover of the balance (please lay the side of the balance downwards to open the bottom cover, do not make the upside down)

2. To use the hook in the accessories: screw the hook clockwise in the bottom tapped hole. Stop at once to proceed if there is any resistance.

3. Put the goal object to the hook with a line a suspension line, for example.

4. If necessary, set a safety guard to avoid air current.

**Attached list:**

**COMMUNICATION WITH A COMPUTER**

The balance keyboard functions can be accessed via the RS-232 interface. The following commands are available:

\[ U - U \]: units conversion
When the balance is connected with a computer, it is suggested that immediate print (#) be used. In response to this command the balance will transmit whatever number or message appears on the balance display.

The string format output is shown below:

**A B C D E F G H I J K L M**

**A - +/-**: Signs field; usually no display as a space when it is a positive number, - is displayed when it is a negative number.

**B – G**: Number and decimal field; spaces are used when there are less than six digits.

**H – I**: Spaces fields.

**J**: Unit field, it describes the units of the number being transmitted. Your balance will transmit **G** for grams, **O** for ounces and **C** for carats.

**K**: Stable character, it corresponds to the **OK** indicator on the display. **S** means the reading is stable, space means the reading is not stable.

**L**: Return character.

**M**: Line feeds character, it indicates the line feeds.
RS-232 INTERFACE HARDWARE

This balance adopts the transmit and receive lines of standard RS-232.

The data format is:
- 1 start bit.
- 8 data bits include parity.
- 1 stop bit.

The instruction to connect the balance to external device is as follows:

**Pin description**

2 – TXD - - - scale transmits data

3 – RXD - - - scale receives data

5 – GRD - - - signal ground

**Note:** “Handshake” signals, such as “clear to send” (CTS) are not used. The peripheral must have a minimum buffer (15 characters).

It is suggested that the maximum recommended cable length is 15 meters, the load impedance of the device connected should be between 3000 and 7000 ohms with no more than 2500 pf shunt capacitance.
ROUTINE MAINTENANCE AND TROUBLESHOOTING

Troubleshooting

Only the trained professionals are allowed to do repair work. There is a risk for the user if non-professionals do the repair.

Clearance

- Turn off the balance and unplug the data cables.
- Avoid the liquid into the balance.
- Any corrosive cleaner (solvent) is forbidden to use.
- Wipe the balance with a piece of soft cloth.
- Remove the weighing pan before wipe the balance.
- Remove the shield ring and pan support with the weighing pan which helps avoid damage to the weighing system.

Clearing the stainless steel surface

All the stainless Steel components need to clean regularly. Remove the weighing pan and thoroughly clean it with a damp cloth or sponge. The cleaner applicable to stainless Steel are recommended. Wipe the stainless Steel surface of the balance first and then clear the stainless Steel weighing pan. Make sure there is no dirt and then wipe the stainless Steel component again. Dry the balance by air. If necessary, smear the proper oil on the surface as additional protection.
Note:
After remove the weighing pan and the pan support, avoid any liquid or solid pellet into the installation hole.

Safety check

If the balance could not work normally:

- Cut off the power immediately, keep and do not use it again.
- Keep it in a safe place to make sure it won’t be used for the moment.
- Inform the nearest Service Center or your Distributor. The repairman must have had professional training.

If there is any other trouble, please contact your local distributor or service center.
TECHNICAL CONDITIONS

AC power, voltage, AC frequency output: AC-DC Adapter, input 220V/110V, 7.5V (+15% to -20%) 48-60Hz

Power consumption: Maximum=16W, average=8W

Work temperature range: +10°C to +30°C (50°F to 86°F)

Temperature range allowed: +5°C to +40°C (41°F to 104°F)

The balance could assure the normal work: +5°C (41°F) to +40°C (104°F)

GUARANTEE

This scale is guaranteed for one year from the delivery date. The guarantee covers any fabrication defect of the material.

During this period **GRAM PRECISION, SL**, covers the manpower and the spare parts necessary for the reparation of the scale.

This guarantee does not cover the failures caused by an inappropriate use or overcharge.

**The guarantee does not cover the freight cost (transport) necessary to repair the scale.**
